

## DAY 1 - FRIDAY

### Baltra Airport

Upon arrival at Seymour Ecological Airport, a check-up is carried out first, to ensure that no foreign plant or animal species are introduced into the islands. Furthermore, your TCC (Transit Control Card) is stamped; this must be kept safe during your trip, as it has to be presented again on your return flight. In addition, entrance to the Galapagos National Park is due for entry (US \$100), if this has not yet been paid. Your guide will meet you at the airport, assist you with the luggage and accompany you on the short bus ride. Here you will climb aboard the M/Y Aqua! After greeting the crew and the captain, your cabins will be assigned to you and then you will enjoy your first lunch on-board.

### PM - CC Fausto Llerena

A tour at Fausto Llerena Breeding Center you can see the tortoises of Española Island, ending in the tortoise exhibit corral. Tortoises of this corral are accustomed to humans; it is an excellent spot to be photographed with them!

## DAY 2 - SATURDAY

### AM - Dragon Hill (Santa Cruz)

The visitor site at Dragon Hill has been open to visitors since 1993. This site is located in northwestern Santa Cruz Island and consists of a trail that leads to a hyper-saline lagoon behind the beach, frequently visited by flamingos, pintail ducks and other species of birds. This site has been re-populated with land iguanas from Seymour, Isabela and Santa Cruz island. There is a short walk to the hill, which offers a beautiful view of the bay.

### PM - Sullivan Bay

The arrival in Sullivan Bay is like a moon landing. The desolate, sprawling fields seem to be mostly lifeless, but this island, which is particularly popular among photographers, still offers a lot to see. There is even some life! Green sea turtles burrow in the small white sand beach, where you can also find crabs, blue herons and oystercatchers.

## DAY 3 - SUNDAY

### AM - Egas Port

We will have a "wet-landing" and take an easy walk along trails and on the beautiful shoreline of the black-sand beach, where you can see birds, sea lions, Sally Lightfoot Crabs, marine iguanas and Galapagos Fur Seal. During the walk you will be able to see some of Darwin's finches, yellow warblers and many other beautiful and unique animals!

### PM - Chinese Hat Islet (Santiago)

Chinese Hat is a 52m/170ft high volcanic cone, forming another islet right off the rocky coast of Santiago, where a small colony of Galapagos penguins have settled.

Approaching Chinese Hat from the north, you will understand the meaning of the name. This is an excellent place to learn more about volcanoes, lava bombs and lava tunnels. You will arrive just in time to witness how this barren islet is colonised by pioneer species that have begun to sprout! Beautiful beaches of white coral sand and holes in the eroding lava fields are filled up with lava sand, which enables rooting. Galapagos sea lions and countless marine iguanas contribute to fertilisation, and altogether create many favourable options for newcomers, such as saltbush and the sesuvium carpet.

## DAY 4 - MONDAY

### AM - Rabida Island

After a 'wet landing' on the remarkable red beach of Rabida, there are two short guided hikes. Oxidised iron particles give the rocks and sand their rusty colour. The beach wall holds a shallow green-fringed lagoon; this oasis is the most fertile place on the otherwise arid islet, which is overgrown with leaf-dropping palo santo trees. The salty pool attracts all kind of aquatic birds, like pintails and sometimes American flamingos. Between the ever-green foliage of the surrounding mangrove bushes many species of songbirds hide and breed. One of the most outstanding attractions is the major breeding colony of brown pelicans, the only ones in the world that plunge-dive.

Sullivan Bay

## PM - Bartholomew Island

The beautiful volcano islet of Bartholomew is among the youngest of the islands, and on a geological scale was just recently born out of fire. Although at first sight lifeless, Bartolomé offers some of the wildest landscapes and best panoramas of the entire archipelago. To enjoy the postcard view of the idyllic 'Pinnacle Bay' you have to climb the stairs to the viewpoint on top of the island (114m/375ft). Enter a dramatic world of threatening (though extinguished) nearby spatter cones, craters, and lightweight lava droplets that have been spewed out by fiery fountains. The Summit Trail is also ideal for witnessing how scanty pioneer vegetation such as lava cactus struggles to take root in the bare virgin lava fields.

## DAY 5 - TUESDAY

### AM - Mosquera

Though close neighbours, Mosquera and North Seymour offer a very different experience; diverging habitats attract different residents. While North Seymour contains large breeding colonies of boobies and frigate birds, Mosquera stands out as one of the largest concentrations of Galapagos sea lions in the entire archipelago. It's also one of the few spots inside the National Park where you can stroll around freely, without being restricted to a trail.

Galapagos sea lions are real beach lovers and Mosquera offers beautiful white coral sand beaches contrasting with the azure coloured water. This islet is just a few metres higher than a sandbank and doesn't complicate their landing, and they can roll relaxed in the surf. For fishing they just have to enter the Itabaca Channel, which is a sort of natural place in which lots of marine life and schools of fish are concentrated.

### Transfer out to Baltra Airport (GPS)

It's time to say goodbye to Galapagos! It's been a pleasure accompanying you on this unique trip and hope to see you again very soon!

Assisted by the naturalist guide and some crew members, the dinghy will bring you and your luggage to the Seymour Ecological Airport, where we will take the shuttle back to the airport.

In case you have booked your trip for a longer stay with us, we would be welcoming any potential new fellow passengers to the yacht, and continue our trip to the next visiting site!
